

## Central Red Sea

## Global Pressure Indicators

1) This is a mapping exercise that ranks a series of global data layers to understand the different contexts and/or pressures of various reef locations. Local knowledge and validation is crucial.  
 2) Preliminary results are subject to change following scientific peer review; updated data layers can be found on <https://programs.wcs.org/vibrant oceans/Map>

## Top Two Pressures

1. Pollution: Nitrogen
2. Pollution: Sedimentation

## Pressure Ranking

Pressures ranked from highest to lowest; BCU average and pixels compared to all reef pixels

A value in the 50th percentile means that the BCU's average is higher than 50% of the world's coral reefs values

## Global Context
